Assessment details.

Group Final Proposal Presentation

v15092026

GenAI use policy.

The use of AI/GenAI ***is permitted*** in the production of visual materials for presentation. However, it is probably wiser for the visual materials you present to be a direct representation of your group's project software! All students will be asked during their presentation to explain and justify, in detail, the material they present to the class. Students will be graded on both their demonstration, presentation, and on their ability to understand and answer questions about the material they are presenting. Hence if GenAI is used, it must not be at the expense of student understanding, reasoning, or communication skill.

Task description

The purpose of this task is to demonstrate your team's collective and individual ability to professionally deliver a **final project proposal presentation** and provide a critical analysis of your planned work. The presentation should honestly describe the proposal, including its goals, feasibility, risks, and scope, without being unrealistic regarding your potential achievements. As part of the task, you must also critique the final proposal presentations of your classmates and provide an assessment of the extent to which you feel their proposals are clear, feasible, and well-justified.

In your own presentation, your team must engage and convince the audience that your project proposal is achievable and delivers value. You must present the proposal interactively in class, showing how each of your team members have contributed within the agreed constraints (time, availability, work capacity, etc.). You should demonstrate that you have understood your users' requirements and explain how these will be addressed through your proposed solution, including a structured wireframe walk-through of key features.

Each individual and your entire team must complete your own presentation in two strictly sequential parts. **Part 2 cannot be commenced until Part 1 has been successfully signed-off.**

1. **Presentation draft sign-off + updated project documentation** (Grade: Satisfactory/Unsatisfactory) – discussion and sign-off by teaching staff during the scheduled weekly studio.
2. **Final proposal presentation** (Grade: 0–100%) – for "live" presentation and Q&A during a subsequent scheduled weekly studio session.

Assessment method

Your entire team must attend and participate in both sign-off and final proposal presentation unless formal Special Consideration has been approved (details below).

Presentation Sign-off

All team members need to be present in the studio for the team and individual sign-off activities.

Team sign-off is required during Weeks 9 & 10 studio sessions by assigning each team member a subset of the items below to explain to the supervisor. Team members who do not participate will not be

signed-off, and will be ineligible to present during the final proposal presentation unless they receive formal special consideration via the centrally managed process.

Week 9 - Draft Requirements Traceability Matrix (RTM) - Team sign off

- Basic structure of the RTM to be signed-off. This includes all the columns like Description, Source, Category, Status, Priority and any others relevant to your project.
- Students to show a draft of at least 3 functional and 2 non-functional requirements for their project.

Week 10 - Final Requirements Traceability Matrix (RTM) - Team sign off

- Updated and final structure of your RTM to be signed-off with all the necessary columns.
- These are the final requirements agreed upon by your team and your project supervisor.
- Further modifications to your requirements (if any) will need to be discussed and approved formally by your project supervisor.

Week 10 – Individual group member sign-off

Each group member is required to obtain sign-off on a draft, plain-text slide deck for the proposed final proposal presentation, as follows:

- **Draft title slide (Slide 1)**
  Including project title, group name/number, project topic, and team member names and IDs.
- **Proposed topic overview slide (Slide 2)**
  Showing team member presentation contributions.
  Example:
  a. Team member 1: “Describe user requirements and scope”
  b. Team member 2: “Present business case and feasibility analysis”
  c. Team member 3: “Walk-through of wireframes and proposed key features”
  d. Team member 4: “Summarise project goals, risks, and conclusion”
- **Draft presentation and demo content slides**
  On each subsequent slide to be presented as part of the final proposal presentation, each individual group member must include (plain text) a draft **3–5 bullet point summary** of the main points of their proposed contribution, or, the main features of the proposed solution that will be described. When visual features of the proposed system will be presented, include a **diagram, mock-up, or wireframe**.
  Example:
  “Wireframe walk-through: user login feature” (Slide 3) – Alex Lee
  a. Show diagram of proposed login interface.
  b. Explain how user authentication will be handled.
  c. Indicate which requirements this addresses (RTM reference).

  “System architecture overview” (Slide 4) – Rachel Griffin
  d. Present high-level design of system components.
  e. Show how components map to proposed user requirements.
  f. Highlight technical feasibility and anticipated risks.

Presentation and Proposal Content Summary

A team's total pitch time is determined by the number of members: 3-4 members: 12 mins, 5 members: 14 mins (+ Q&A time as required - TAs will stop the clock during Q&A). Within the allocated time the following material must be covered between the group members:

- **Introduction** to: project team, project topic, project main goals, project user group, project use cases (2+), project user requirements consultation (or background research), project testing approach.

- **Proposal presentation**:
  - Include a concise run-through of the final proposal report, highlighting the project's goals, feasibility, project management methodology.
  - Indicate 5 significant requirements and their relevance and importance to the end users.
  - Structured software wireframe walk-through of proposed key features.
  - Present your project plan including a work breakdown structure (WBS) depicting the breakdown of project activities and tasks.
  - Present a schedule in the form of an updated Gantt chart showing all the task dependencies and milestone dates.

- **Conclusion:** verbal summary of what (in-scope) goals are anticipated to be achieved; what is out of scope; anticipated challenges; one key message with specific evidence/anecdote that the team has learned about effective teamwork; one key message with specific evidence/anecdote about effective project management.

Important requirements

- Reading text word-for-word is ***not*** sufficient for a pass grade in presentation fluency.
- Phone use is ***not*** permitted for speaking notes, but ***may*** be used for time-keeping. If a speaker holds a phone, tablet, and/or refers to a laptop for speaking notes during their presentation, their individual fluency mark will be capped. **NOTE:** Looking at slides *as seen by the audience* on a lectern laptop or room screens ***is*** acceptable.
- Printed or hand-written notes, laptop screen-presenter notes, handheld cards or small sheets may be used discretely.
- Presenters must monitor their audience and promptly respond to questions.
- Presenters must be sufficiently familiar with their material to resume a presentation smoothly after answering questions mid-pitch.
- Presenters must keep to time.
- The name of the presenter must be clearly shown on all the slides that the presenter is talking about. Please show the name as recorded on Allocate+.
- **Teams exceeding the allocated time overall will be penalised 5% points from each *individual* team member's mark for every minute and part thereof over the time limit.** (This penalty is designed to encourage the whole team to assist one another to keep to time, and so that the last speaker does not receive an unfair penalty due to an earlier team member failing to keep to their rehearsed time allocation. Q&A time is not counted towards the time limit, the clock will be stopped during Q&A periods.)

Note: A detailed marking rubric will be made available as a separate document on Moodle, under the assessment resources.

Special consideration procedure.

Students who are unwell and unable to attend 1 or 2 above at the scheduled time may seek special consideration and an extension on task 1, 2, or both, via the usual centrally managed process. The remainder of the team must still meet the scheduled sign-off and/or presentation.

1) Sign-off may be rescheduled for an individual student after *central approval of* special consideration by contacting the unit Head TA. It may then be conducted via Zoom or at an alternative studio session prior to the pitch presentation.
2) Formal presentation may be rescheduled for an individual student's component of a group pitch after *central approval of* special consideration by contacting the unit Head TA. It may then be conducted without the other team members at the discretion of the teaching team via Zoom, or at an alternative studio session.
