FIT3163 Data Science Project Part 1
FIT3188 Cyber Security Project Part 1

Assessment details.

Group Project Meeting Minutes & Videos

5 x group submissions at approximately fortnightly intervals.
V10082026

Learning Outcomes
This assignment targets all unit learning outcomes.

GenAI use policy. (Restrictions apply)
The use of AI or GenAI *is not* permitted in any way or form for the video components of this assessment as this is an opportunity for you to document your team work during group meetings.

The use of AI or GenAI *is* permitted in the production of the Meeting Minutes to document your team work during group meetings in writing. Note that the use of GenAI for this purpose does not exempt groups from ensuring the Minutes are an accurate and complete reflection of the video recorded meeting activity.

Task description.
The purpose of this task is to allow you to demonstrate your ability to manage and successfully conduct project work and team collaboration during meetings.

You must **submit:**

- 5 video recordings of your project team meetings across the semester.
- Each recorded meeting must be 20 - 60 minutes long.
- All group members must attend each recorded meeting submission (unless a member receives Special Consideration - see below).
- Every meeting recording must be accompanied by accurate and complete time-stamped Meeting Minutes and Agenda. If these are written by hand in a group-shared google doc they must show the time-stamped edit-stages of the text. If the Meeting Minutes are generated by GenAI, they must be produced “on the fly” during the meeting, and GenAI must be used to include time-stamped additions to the Meeting Minutes that match the time of the recorded video (many tools provide this facility).

Meetings must be structured formally, and it must be clear to the viewer how your team is managing the process of conducting the project according to one of the identified project management strategies.

Assessment method.
Teaching staff will randomly select **three (3) out of the five (5)** meeting recordings for assessment.

If fewer than five recordings are uploaded by their respective deadlines, up to three available recordings will be assessed. However, the final mark for the task will be scaled according to the proportion of the required recordings submitted.
For example:

- If 4 out of 5 recordings are submitted on time, the mark for the three assessed recordings will be scaled by 0.80 (4/5).
- If 2 out of 5 recordings are submitted, those two recordings will be assessed and the mark will be scaled by 0.40 (2/5).
- If 1 out of 5 recordings is submitted, it will be assessed and the mark will be scaled by 0.20 (1/5).

Failure to submit any recordings will result in a mark of zero for the task.

Special consideration procedure.

Students who are unwell may sometimes be unable to attend a recorded group meeting. Since the scheduling of these meetings is left to individual groups, groups should aim for all members to attend - that's the best way for the project to succeed. It isn't appropriate for meetings to be scheduled by a team during a timetable clash for a team member, or for any reason where Special Consideration is likely to be declined. Please be considerate in scheduling - some students have tight schedules! If evidence is provided that meetings were scheduled inappropriately or with inadequate notice leading to some students' absence, the recording may not be accepted for assessment of the team.

If a meeting cannot be organised with all members present here is the procedure:

- The sick or absent team member must apply for special consideration via the central system to obtain an extended submission date.
- This "complex special consideration application" will not automatically be allocated a late submission date, so submission via the group's Moodle link will not be possible. Instead, after the student receives approval for Special Consideration they should email the unit Admin tutor with evidence of an approved case and a new submission date.
- The Admin. Tutor will acknowledge receipt and provide a submission "catch-up link".
- The project group must then schedule a Catch Up meeting, with Agenda and Minutes, including at least the late student and one other team member who was at the original recorded meeting.
- Record the Catch Up meeting on video and create Meeting Minutes as usual.
- The late-submitting student must upload the Catch Up recording, Agenda and Minutes via the new Moodle Catch Up link.

Recording setup - if an inappropriate setup is used, a mark of 0% will be allocated.

- We recommend using a shared Zoom meeting recording, with each participant clearly visible in their own laptop camera (cameras on please - do not wear your pyjamas to the meetings), and audio clearly recorded as each member is speaking.
- If the group is meeting-face-to-face, each member must still use their laptop Zoom connection to ensure clear audio and video is recorded, but they may consider turning off laptop speakers to avoid audio-feedback whilst working in the same room.
- Ensure you have stable support for your camera and a stationary, stable seat for yourself.
- Record yourself talking clearly, directly and naturally to your team-mates. This is live documentation of your meeting "as it happens", it is not a staged performance.
- Ensure the environment and equipment facilitates clear video and audio recording without background noise or distractions - hold your meetings in a quiet, private location.
- Note: Powerpoint-style slides are not required for meeting recordings, but sharing the screen to discuss your documents, software, user interfaces etc. is an excellent way to record the topic of conversation and make it visible in the recording. We strongly recommend you do this where possible. An alternative under some circumstances may be to point a laptop camera at a whiteboard as you all draw on it and discuss your work.

Assessment meeting structure.

There are many ways to structure a group meeting, and these vary depending on the project management style you adopt. However, there are basic requirements for each meeting that will be required, depending on the approach you adopt.

The basic requirements of a team meeting are always the same. Below is one formal way to run a meeting with examples of what might be said. What matters is not so much the approach you adopt, but the fact that the **meeting is structured and documented properly**, **and that everyone knows and is focused on what is happening and has an opportunity to contribute when appropriate**. At the conclusion of the meeting everyone should understand the decisions that have been made, and be willing to move forward with them. Everyone must know what to do before the next meeting, and when it will be held.

Evidence of progress: Each recorded meeting should show evidence of the team's ongoing progress. Teams should actively discuss all relevant project concerns that needed their attention in the previous 2-3 weeks, and up to the current stage of the project. These will likely include discussions of team dynamics and team management issues, project technical considerations, discussion of artefacts that have been produced recently and/or are expected to be produced soon, and any other project-related matter. (This will depend on where you are in the semester and will become clearer as you progress through the semester. You may need to review seminar slides, videos and studio worksheets available on Moodle in respective weeks to guide you). Students are not expected to discuss every issue and artefact in every meeting; rather, the meeting should

demonstrate that relevant issues are being actively managed and appropriate decisions are being made about the project. Discussion of major decisions and related documentation must be shown in the meeting minutes. (You may also attach other supporting material as evidence, eg: notes on any project matter, sketches of diagrams, reference to researched material, videos, etc.)

Formal meeting example.

Beginning.

1) *Commence each meeting with an announcement.*
   Example, "OK everyone, the meeting is starting now. Quiet please, let's focus on the task at hand."

2) *Note who is present/absent, and their roles in the meeting.*
   Example, "Present we have me, Michael, I'm chair for this meeting. We have Vincent who will take the minutes. Maddy is also here to participate. Jeanette could not be here today and has entered her apologies; she is sick and has Special Consideration. She will meet Vincent later to catch up."

3) *Formally run through the agenda, i.e., what will be discussed in this meeting?*
   Example, "Running through the agenda for today... We will start by going through the Action Items from the last meeting to find out how each of them is progressing. Then we'll hear briefly from each team member what they have been doing over the last week other than on Action Items. At this point, each of you can explain what you have done, what you have found to be blocking progress, mention if you need any help, and let everyone know if you are on track to meet your milestones. After that we must make a decision about which of the three user interface design options we will go with. Then we'll run through the Actions Arising from the discussion to make sure that everyone knows their tasks for the coming week, and we'll set the next meeting time. Is everyone okay with that? Is there anything we should add to the meeting agenda as "Other business"? ..."

Middle.

4) *Formally step through the items on the agenda.*
   Step through the agenda one item at a time, making it explicit which item is being discussed, ensuring everyone has time / opportunity to contribute, and making sure that new Action Items from that agenda item are formally recorded in the Meeting Minutes.
   Example, "Ok everyone, are you all clear about the Actions Arising from item 1 on the agenda? We all agreed Vincent will do the background literature research, the rest of us will seek potential user feedback. Vincent? Maddy? Yes? Does anyone have anything further we should consider at this stage? ...? Ok, great. Then let's finish agenda item 1 there, and move on to item 2. Vincent, over to you, this item relates to the work you have been doing on the user interface designs..."

End.

5) *Once the agenda has been covered, step through the Actions Arising that have resulted.*
   Example, "We have now stepped through the entire agenda. Vincent, since you have been taking the minutes, please can you read through the Action items? … Okay everyone, any questions about those items? Can anyone see any issues? …"

6) *Set a time and get explicit agreement on the next meeting.*
   Example, "OK then, let's set a meeting date for next time. Can everyone meet at the same time and place next week? … Vincent, is that time okay with you? Maddy? …"

7) *Conclude the meeting.*
   "Thanks everyone for coming. I know it's late, but I think this was a productive meeting. Let's close the meeting here. I look forward to seeing you all next week!"

Marking Guide.
Failing to meet any of these criteria for a meeting recording will result in a grade of 0% for the submission:

- Provide clear video and/or audio making it easy to see and hear every group member speak.
- Communicate simply and speak clearly making it easy to understand the presenters.
- Provide properly structured, time-stamped Meeting Minutes that document each recorded video meeting including:

  - ☐ Participants / apologies / proposed method for absentees to catch-up
  - ☐ Agenda items
    - Main discussion points, options considered
    - Issues to be resolved (arising action item) and who will action them
    - Outcomes or decisions and brief rationale

  - ☐ Previous (from the last meeting) action items / who was responsible for completion / progress on items since last meeting.
  - ☐ New (from this meeting) action items arising / who is responsible for completion
  - ☐ Agreed next meeting time and location

A detailed marking rubric will be made available as a seperate document on Moodle, under the assessment resources.
