Assessment details.

Mid-Semester Project Pitch - Individual and Group Sign-off, Group Presentation
v10082026

GenAI use policy

The use of AI/GenAI ***is* permitted** in the production of visual materials for presentation. For example, it may be used to create mock-ups, or for brainstorming project visual interfaces, or examples demonstrating project "look and feel" for inclusion in slides. However all students will be asked during their presentation to explain and justify, in detail, the material they present to the class. Students will be graded on both their presentation, and on their ability to understand and answer questions about the material they are presenting. Hence if GenAI is used, it must not be at the expense of student understanding, reasoning, or communication skill.

Task description

The purpose of this task is to demonstrate your team's collective and individual ability to professionally pitch your project, and critique the pitches of your classmates.

In your own pitch, your team must engage and convince the audience that you clearly understand the problem from the perspective of your potential users and that you have considered how to tackle it, are proposing a sound and achievable solution, and have the necessary skills and enthusiasm to deliver within constraints (time, availability, work capacity etc.).

Each individual *and* your entire team, must complete your own pitch in two strictly sequential parts.
Part 2 cannot be commenced until part 1 has been successfully signed-off.

1. **Pitch draft sign-off + project documentation (Grade: Satisfactory/Unsatisfactory)**
   - discussion and sign-off by teaching staff during the scheduled weekly studio.
2. **Pitch presentation (Grade: 0-100%)**
   - for "live" presentation and Q&A during a subsequent scheduled weekly studio session.

Assessment method

Your entire team must attend and participate in both sign-off and pitch presentation unless formal Special Consideration has been approved (details below).

Pitch Sign-off

Week 5: Sign off the following content from your team supervisor is required during week 5
You have met with your team supervisor and completed at least one (1) group meeting + submission to obtain the following details

1) Project Scope
Project scope is feasible, sufficiently challenging and well outlined.
Aspects of the project that might reasonably be assumed to be in scope, but are not, are clearly identified and a rationale for their exclusion is provided.

2) **Weighted Scoring Model**
The project has been properly compared to a variety of other options using a WSM.

3) **Project Goals**
Project goals are clearly and simply stated in a bullet list.

Faculty of Information Technology

FIT3161 Computer Science Project Part 1
FIT3163 Data Science Project Part 1
FIT3188 Cyber Security Project Part 1

The following is on a draft slide deck for your proposed pitch as follows:

1) Draft title slide (slide 1)
Including project title, group name/number, project topic, team member names and id's.

2) Proposed topic overview slide showing team member presentation contributions.
For example, "Overview of presenters and topics" (slide 2)

a) Team member 1, Rachel Griffin: "Project Introduction, team members introduction"
b) Team member 2, Bill Yarra: "Business Case"
c) Team member 3 Piranesi Montgomery: "Summary Goals"
d) Team member 4 Samantha Noway: "Scope and Conclusion"

3) On each subsequent slide that will be presented as part of the pitch, each group member must include (plain text) a draft 3-5 bullet point summary of the main points of *their* proposed presentation contribution. For example,

a) "Project Outline" (slide 3) - Rachel Griffin
- Discuss the perceived need.
- Present our current understanding of the proposal.
- Explain who we think the users are likely to be.

b) "Problem and Opportunity" (slide 4) - Bill Yarra
- Present the problem or opportunity statement.
- ...

c) ...and so on for each slide in the deck and each presenter in the team.

Pitch Presentation Content

A team's total pitch time is determined by the number of members: 3-4 members: 12 mins, 5 members: 14 mins (+ Q&A time as required - TAs will stop the clock during Q&A). Within the allocated time the following material must be covered between the group members:

Business case

a) Introduction / Background
b) Business Objective
c) Current Situation and Problem/Opportunity Statement
d) Critical Assumptions and Constraints
e) Analysis of Option and Recommendation
f) Preliminary Project Requirements
g) Schedule Estimate

Refer to the JWD business case listed under the "Additional files" as an **example** only.

Project summary

a) Present a high level overview of your project
b) Describe your intended users and other stakeholders

Project Goals

a) Present clear, simple and measurable S.M.A.R.T. goals
b) Show evidence of thorough background research, with citations and references

FIT3161 Computer Science Project Part 1
FIT3163 Data Science Project Part 1
FIT3188 Cyber Security Project Part 1

Project Scope

a) Provide an outline of within- and beyond-scope elements
b) Ensure your scope is feasible within the available time and resources, yet sufficiently challenging for your group to make it worthwhile.

Important requirements

- Reading text word-for-word is ***not*** sufficient for a pass grade in presentation fluency.
- Phone use is ***not*** permitted for speaking notes, but ***may*** be used for time-keeping. If a speaker holds a phone, tablet, or refers to a laptop for speaking notes during their presentation, their individual fluency mark will be capped. **NOTE:** Looking at slides *as seen by the audience* on a lectern laptop or room screens ***is*** acceptable.
- Printed or hand-written notes, laptop screen-presenter notes, handheld cards or small sheets may be used discretely.
- Presenters must monitor their audience and promptly respond to questions.
- Presenters must be sufficiently familiar with their material to resume a presentation smoothly after answering questions mid-pitch.
- Presenters must keep to time.
- The name of the presenter must be clearly shown on all the slides that the presenter is talking about. Please show the name as recorded on Allocate+.

- **Teams exceeding the allocated time overall will be penalised 5% points from each *individual* team member's mark for every minute over the time limit.** (This penalty is designed to encourage the whole team to assist one another to keep to time, and so that the last speaker does not receive an unfair penalty due to an earlier team member failing to keep to their rehearsed time allocation. Q&A time is not counted towards the time limit, the clock will be stopped during Q&A periods.)

Note: A detailed marking rubric will be made available as a separate document on Moodle, under the assessment resources.

Special consideration procedure.

Students who are unwell and unable to attend 1 or 2 above at the scheduled time may seek special consideration and an extension on task 1, 2, or both, via the usual centrally managed process. The remainder of the team must still meet the scheduled sign-off and/or presentation.

1) Sign-off may be rescheduled for an individual student after *central approval of* special consideration by contacting the unit Head TA. It may then be conducted via Zoom or at an alternative studio session prior to the pitch presentation.
2) Formal presentation may be rescheduled for an individual student's component of a group pitch after *central approval of* special consideration by contacting the unit Head TA. It may then be conducted without the other team members at the discretion of the teaching team via Zoom, or at an alternative studio session.
